

# Expected Results

The accumulated result of the project is achieving strengthened local and regional capacities for energy planning, management and control. The immediate result is increased energy efficiency of homes, appliances, commercial buildings, and industries in the Baltic Sea Region. This will bring about many benefits such as

- Reduced costs and increased savings
- Reduced need for costly new power plants
- Increased reliability of energy supply systems
- Reduced dependence on traditional energy sources
- Reduced emissions of pollutants, harming effects on public health and environment
- Increased public awareness on energy saving and efficiency
